- [trailblazer](#)

Certificates:

- Platform Developer I
- Platform Developer II
- Administrator
- Advanced Administrator
- Platform App Builder
- AI Associate

Further Learning Plan:

- JS I
- Nonprofit Cloud
- SPQ

Skills:

- Apex / Java
- LWC
- HTML, CSS, XML
- SF API Integration
- Queues, Batch, Schedulers
- VF (VF as PDF)
- Scratch Orgs Git / Bitbucket
- VSCode / IntelliJ IDEA
- Data Model
- Sharing rules
- Opportunity Team
- Flow | Process Builders
- Workflow Rules
- Mulesoft
- Agile/Scrum methodologies
- JIRA

Languages:

- English B2

Education:

2023: MuleSoft Development
2022: Full Stack Developer
2013: Primary Education:
Engineer in the Energy Sector

Hobbies:

- 3D Modeling and Design

Work Experience:

- Marketidea
April 2023 - Present (1 year 7 months)
I am the first programmer hired by this company. I handled a large number of tasks on various projects (over 10 ongoing projects with varying levels of workload). Established coding standards for the company, convinced the team to use Git for all projects, and implemented a clear task differentiation system.
As the company gained more employees, I was responsible for training them, enhancing their special skills and preparing them for certifications.
Worked extensively with JSON (500,000 characters or more in each instance), optimized legacy code, managed API requests to banks, and generated invoices for several companies.
- Twistellar
December 2021 - April 2023 (1 year 4 months)
Worked on a major project under the direction of a highly experienced architect (over 13 years in IT). While working on the project, I completed tasks of various levels, ranging from creating objects with triggers to developing complex logic for self-calling queues. Developed skills working with batches, future methods, queues, schedulers, and much more.
Acquired extensive experience working with APIs. I have significant experience using VF as PDF. Since the project was quite strict, I learned to maintain proper documentation and work in a team using different methodologies.

Project Experience:

Sales and Maintenance

Project Duration: 13 months (ongoing)

- Designed the data model and implemented triggers with Flow and Aura.
- Managed integrations with over 20 APIs.
- Worked extensively with queues and schedulers.
- Built dynamic list views based on events.
- Developed warehouse operation logic.
- Created a custom login system.
- Developed a large number of LWC components.
- Utilized Git and SOQL/SOSL for effective development.

Service and Maintenance

Project Duration: 9 months

- Designed the complete data model and implemented triggers.
- Developed all automation processes, including extensive use of Flow.
- Created a custom logging system.
- Worked with a large number of queues.
- Integrated with REST APIs.
- Utilized Git, Scratch Orgs, and Custom Metadata Types for scalable solutions.
- Developed an SPQ-like functionality.

Service and Testing

Project Duration: 5 months (ongoing)

- Developed the data model and triggers, incorporating Flow for automation.
- Processed a large volume of incoming data through APIs.
- Generated complex PDF invoices with extensive data.
- Worked with Apex Batch for handling large data volumes.

Healthcare

Project Duration: 3 months

- Managed a wide range of API integrations.
- Worked on Communities and SSO systems.
- Utilized Flow and Process Builder for automation.
- Contributed to Lightning Experience Customization for enhanced user experience.

Lead Sales

Project Duration: 2 months

- Developed lead sorting logic for company-specific distribution.
- Integrated and processed a high volume of incoming APIs.
- Utilized Flow for automation and efficiency.
- Enhanced processes with Custom Metadata Types.
