E X P E R I E N C E

June 2024 - Present
MiKi Digital - Blockchain backend developer
DeFAI platform (HeyAnon) (outsource). Contributed to integration of popular TON protocols and CEXes. Worked on hand-crafted TON explorer for tokens and NFTs.
HyperEVM delta-neutral trading tool (Perpflow). Tool that helps users open delta-neutral trades on Hyperliquid. As a team-lead I've worked with blockchain, backend and frontend developers. Took part in developing and testing contracts.
Social Network with an NFT Marketplace. The Web2 part mirrored Instagram, while the Web3 part enabled buying and selling compressed NFTs. The main challenge was integrating the backend with Solana. To optimize gas fees, we developed three specialized programs. I led backend development and contributed to Solana programs.
Telegram Trading Bot for TON (GemZ Trade). One of the first bots for TON token trading, it aggregated multiple DEXs for the best rates and supported all TON wallets.

December 2023 - May 2024
IDT - .NET developer
Took part in developing and maintaining fintech product. Worked a lot with AWS. Significant part was communicating with African partners.

April 2023 - December 2023
Modsen - .NET developer
Worked on internal product developing bug-tracking system. Reworked auth microservices.

March 2022 - April 2023
ByKa - .NET developer

E D U C A T I O N
